

SMART INDIA HACKATHON 2026

MANA-SEHAT
“Aapki Baat, Sehat Ka Saath ”

- **Problem Statement ID** – 26047
- **Problem Statement Title-** Patient Case-Taking Software
- **Theme-** MedTech / BioTech / HealthTech
- **PS Category-** Software
- **Team ID-**
- **Team Name (Registered on portal)** – MANA-SEHAT

PROBLEMS

Doctors have almost no time to listen:

Physicians get just 2 to 5 minutes per patient to hear what is wrong, preview old papers, perform an exam, and write a prescription, making missed details and diagnostic errors almost inevitable.

Hospitals are crushed by huge crowds:

Big public hospitals deal with 4,000 to 10,000 patients every day, creating massive queues that human staff cannot sort through manually without major delays.

Ayurvedic (AYUSH) care takes too long on paper:

Traditional medicine requires deep assessments of body type, digestion, and lifestyle, which is impossible to write out by hand during a super-rushed 2-minute visit.

Medical records are a messy paper pile:

Patients carry scattered, handwritten, and old papers from different clinics written in different languages, forcing doctors to waste minutes reading and sorting files.

Current health apps leave people behind:

Most platforms require advanced digital literacy, complex manual data entry, and typing skills, which excludes elderly, rural, or low-literacy patients who make up most of the hospital crowd.

Digital health misses the front door:

Even though national health IDs exist, there is no easy tool at the entrance to capture a patient's spoken history and digitize paper records before they see the doctor.

SOLUTION UNIQUENESS

SMART INDIA
HACKATHON
2026

Potential Challenges

Fragmented Patient Health Records

- Records spread across prescriptions, labs & consultations
- No unified view of patient health history
- Time-consuming to compile complete background

Complex Medical Information

- Patients don't understand medical terminology
- Lab values and report details cause confusion
- Existing health info remains unclear to patients

Incorrect or Unsafe AI Responses

- AI may give inaccurate responses with unclear input
- Healthcare requires validated knowledge sources
- Safety mechanisms & human oversight are essential

Language & Communication Barriers

- Patients struggle to describe symptoms via text forms
- Language gaps hinder patient-provider communication
- Misunderstandings lead to incomplete assessments

Unstructured Medical Documents

- Reports stored as PDFs, scans, or images
- Manual extraction of key info is time-intensive
- No standardized structure for automated processing

Health Data Privacy

- Government & documents contain sensitive data
- Unauthorized access risks patient privacy
- Secure storage & proper handling are critical

How we Tackle Them?

MOST IMPORTANT

Secure & Consent-Based Data Management

- Authentication & role-based access
- Data encryption
- Consent-based data handling
- Audit logs for accountability

OCR & Medical Information Extraction

- Reads scanned reports, PDFs & images
- NLP extracts key details (medicines, test results, dates, etc.)
- Converts unstructured data into useful information

Unified Patient Health Profile

- Combines patient responses, past records & uploaded data
- Structured and organized profile
- Relevant information for doctors before consultation

HIGH TEMPERATURE = HIGH IMPORTANCE

HIGH IMPORTANCE

Grounded & Safe AI

- Uses trusted medical knowledge sources
- Validation mechanisms & safety guardrails
- Helps with understanding and organizing information
- Diagnosis and treatment decisions with healthcare professionals

Patient-Friendly Health Explanation

- Explains medical information in simple language
- Helps patients understand their reports
- Keeps original medical information unchanged

Multilingual Voice & Text Interaction

- Voice and text-based interaction
- Multilingual support
- Speech-to-text & NLP for better understanding

IMPACTS & STAKEHOLDERS

Doctor – Reduced Consultation Time

Structured case summaries reduce repetitive questions and enable faster case review.

Patient / User – Better Access

Multilingual voice and text help patients share symptoms, medical history and reports easily.

MANA SEHAT AI – Faster Processing

Organizes patient inputs and extracts important information from medical documents.

Patient Better Access

Easier and faster access to healthcare services and consultation.

Hospital Staff – Improved Workflow

Structured information supports coordination, patient routing and record management.

Health Record System – Security & Privacy

Consent-based access and secure storage protect sensitive patient information.

BENEFITS

Better Communication
Multilingual input helps patients explain concerns.

Reduced Consultation Time
AI prepares patient information before consultation.

Secure Report Storage
ABHA-linked records keep reports safe and accessible.

Medication Reminders
Timely alerts prevent missed medicines.

Structured Patient Summary
Clear summaries help doctors review cases faster.

AI-Guided Case-Taking
Smart follow-up questions capture complete symptoms.
